Dear Dr. Sumchai,

Mr. Keith Forman forwarded me your email and asked if I could follow up since he is no longer supporting the Hunters Point Naval Shipyard environmental program. Thank you for your email and concern with the Tetra Tech sampling incident at HPNS. The Navy has had similar inquiries from NBC Bay Area News and I have attached those Q&A's below to help respond to your question. In summary, the Navy is aware of the incident and has worked with the contractor to identify and correct the anomalous data. As the ultimate purpose of the Navy's environmental cleanup program is protection of human health and the environment, the Navy has developed and implemented many measures to prevent re-occurrence.

I am also attaching NRC's report on their inspection of TtEC's NRC Rad Material License at Hunters Point, which we had also discussed on the phone a few weeks back.

Please let me know if I can provide you any further information.

Very respectfully,

Catherine Haran, PE

Lead Project Manager  
Hunters Point Naval Shipyard  
[catherine.haran@navy.mil](mailto:catherine.haran@navy.mil)

Q&A's submitted to NBC Bay Area News:

Question: How did the Navy determine that soil samples had been collected from locations different than the ones specified in the final status survey reports?

Navy Response: The Navy reviews field data collected by Navy contractors, including soil sample results. During a routine review of the Navy's contractor data, the Navy determined that some of the soil sample results were not consistent with the results from previous soil samples collected in the same general area. This prompted the Navy to request further evaluation by the contractor to determine the cause and extent of the data inconsistency.

---

Question: The report does not specify which areas and sites that were retested- areas 517, 707, 79/80 North Pier, 500, Parcel C Trenches-did in fact have radionuclides of concern at elevated levels. All of the sites? What about Building 517-Survey Unit 2 specifically? (The areas mentioned above are in Table 2 and Table 3 of the April 2014 "Investigation Conclusion Anomalous Soil Samples At Hunters Point Shipyard Revision 1" report).

Navy Response: Not all of the sites resampled were found to have radionuclides of concern above the Hunters Point Naval Shipyard (HPNS) release criteria. Specific to Building 517, Survey Unit 2, retesting found one Ra-226 sample that was above the HPNS release criteria of 1.365 pCi/g. This sample measured 1.782 pCi/g, which resulted in the remediation of one additional cubic yard of soil from the survey unit. As a comparative measure, in terms of radioactivity in food, Brazil nuts contain approximately 2 pCi/g of radium-226, according to the Nuclear Regulatory Commission.

---

Question: What is the Navy's response to Tetra Tech's investigation into why the soil sample discrepancy occurred?

Navy Response: The Navy determined that the contractor investigated various possible causes for the soil sample discrepancy and implemented several corrective actions to ensure the incident does not reoccur (i.e., conducting additional field oversight, conducting additional training, and supplementing their internal data review methods). The Navy continues to monitor the contractor's performance to ensure that adequate quality control and data evaluation processes are in place.

---

Question: Does this event call into question the quality of data provided by Tetra Tech in the past?

Navy Response: The Navy continues to evaluate all current and historic data collected by the contractor. The Navy is committed to ensuring that all reports contain accurate and defensible data.

---

Mr. Foreman,

Great talking to you. I have fond memories of you despite the heat and rabble. I received confidential info that a Tetra Tech worker substituted clean soil for soil that actually had rad in exceedence levels. Did this incident make it to your attention?

Dr. Sumchai,

Please tell me a phone number and a good time to call you this week. I am assuming you would like to talk to me further about this; I have copied the Lead remedial Project Manager for the Hunters Point Naval Station site, Ms. Catherine Haran.

V/r,

Keith Forman  
BRAC Environmental Coordinator  
Former Naval Station Treasure Island

Dear Mr. Forman,

I am in receipt of the January 2014 Fact Sheet Third a Five Year Review of Remedial Actions Hunters Point Naval Shipyard.

Page 4 of this document asks are the remedies working and effective?

NAVFAC provides the following answers:

Question A: Is the remedy functioning as intended by the decision documents.

Answer- Yes, for Parcels B, C, D-1, G, UC-1 and UC-2 where remedies have been undertaken.

Question B: Are the exposure assumptions, toxicity data, cleanup levels, and remedial action objectives used at the time of the remedy selection still valid?

Answer-Yes

Question C- Has any other information come to light that could call into question the protectiveness of the remedy?

Answer- No

Mr. Foreman, as a former elected representative of the HPNS Restoration Advisory Committee and founding chair of its Radiological subcommittee I wish to formally challenge and appeal Question C. I am personally able to provide documentation that new information has come to light that calls into question the protectiveness of Radiological Operations on both Treasure Island and the Hunters Point Naval Shipyard.

Yes. Thursday at 12 noon works. The Larkin Street Library houses the complete information repository for the shipyard administrative record on the fifth floor. We can meet at the librarian desk at noon.

Hi Ahimsa,

Would Thursday around 12 work for you? I can meet you anywhere in San Francisco. We may hold off on the cameras for now—I'd like to meet with you first to make sure I understand the documents that you have. Does that sounds okay?

Best,

Liz

Elizabeth,

The community room of the Waden Library is in use on Wednesday at 3pm. Can we meet in the studio?

Hi Ahimsa,

Thanks for getting back to me – sorry for the delay in getting back to you! Would it be possible to push the meeting back later than 1? Perhaps closer to 3p? I was hoping that we'd spend an hour just talking about your research, and then maybe conduct the interview later that afternoon? We can conduct the interview at the library if its stays open. Please let me know if that would work.

Thanks for your help!

Liz

Hi Ahimsa,

Thank you for your call today; it was nice to talk to you briefly this morning! I appreciate your perspective, and your willingness to provide historical context to the Hunters Point cleanup. I am hopeful that you might have some time next Wednesday afternoon to meet at a place that's convenient for you. Please let me know if that works!

As promised, here are links to the investigations that we have recently reported:

Dr. Sumchai,

Francisco Da Costa suggested that I reach out to you regarding information about the remediation of Hunters Point Naval Shipyard. I'm an investigative producer with NBC Bay Area News and I'm working on a few stories about the site cleanup. I'd love to chat with you about the tests you have performed at Hunters Point. Please call me at 408-483-2084 at your earliest convenience.

Thank you,

Liz Wagner
